GREENTEK TURFCARE RANGE

2026

Trusted by the best in the game

WELCOME TO THE NEW GREENTEK CATALOGUE!

The **BIG NEWS** for 2026: GreenTek has now become the exclusive worldwide supplier of **StarGreen Topdressers and Sprayers**. These British-built machines deliver exceptional quality and value, with benefits such as:

- Robust British engineering
- Lifetime durability with shot-blasted, zinc-primed, powder-coated finish
- High-spec features included as standard
- Simple, reliable controls
- **5-year parts and labour guarantee**
- Outstanding value for money

If you're considering a new topdresser or sprayer this year, **ask your local GreenTek Key Dealer for a StarGreen quote today**. New production will be rolling out through the Spring, on a first come first served basis.

Also new this year:

- **Dyna-Roller vibratory roller units** (p.50) – with innovative double vibrating rollers, at a fraction of the cost of a ride-on roller
- **Dyna-Seeder Mk2** (p.52) – with even more economical seed distribution rates

All backed by our unique **12 Month Money-Back Promise** and covered by our **Gold Star 5 Year Warranty**

12 MONTH MONEY-BACK PROMISE

We guarantee that every GreenTek turf maintenance product will do exactly what our literature claims – otherwise we will collect it and refund your payment 100% in full, right up to 12 months after purchase!

5 Year Warranty

All GreenTek turfcare machinery is covered by a **FREE 5 Years Parts And Labour Warranty** for commercial use. Or a FREE 3 Months Warranty for hire use.

This is a genuine 'bumper to bumper' warranty and includes everything except components subject to fair wear and tear such as blades, brushes, belts, bearings, chains, sprockets etc, and damage caused by corrosion, abuse or lack of maintenance. Outsourced components such as engines, motors, pumps or valves carry the original manufacturer's warranty.

MISCELLANEOUS

GRANT FUNDING AVAILABLE FOR LOCAL SPORTS CLUBS

Local sports clubs can benefit from generous grants of up to £50,000 to improve grassroots football facilities in their communities.

The **Football Foundation's** grant scheme covers 75% of the cost for essential maintenance machinery, helping clubs significantly enhance their pitch quality. Typical machinery packages include vital tools like a 4WD Compact Tractor, Rotary Mower Deck, and a Pitch Groomer or Aerator.

Access to the grant is via the **Pitch Power** app to assess the condition of the pitches, which then generates a pitch report that forms the basis of the grant application.

The **Grounds Management Association (GMA)** pitch assessment team is available to support clubs through this process. They review the Pitch Power reports and provide expert advice on the best maintenance practices and specific equipment required.

For more information and to start your application, simply scan the QR code below to visit the Football Foundation website.

SCAN HERE TO START YOUR FOOTBALL FOUNDATION GRANT APPLICATION

Football Foundation grants can be used for essential machinery such as a tractor and aerator.

A 4-in-1 pitch groomer is often recommended on grant funding reports.

STARGREEN AS200

The Stargreen range of sprayers has become synonymous with robust British engineering, excellent component specification, and affordable pricing. Now incorporated within the GreenTek product portfolio, it includes sprayers to suit all sizes of compact and small agricultural tractors.

Although the Stargreen AS200 is the entry level sprayer in the range, it still has the same build quality, finish, and high-quality components found on the larger models. The standard specification includes a 200 litre tank, 6m folding booms with safety break-back, a top quality three-cylinder diaphragm pump, triple nozzle holders, and triple inline filters. A clean water tank is also included, and a foam bout marker is an optional extra.

This boom sprayer is ideal for sports clubs, schools, and other sports turf or amenity users.

STARGREEN PRO SERIES

These top-specification, British-built sprayers are designed for professional use. The StarGreen AS Pro Series has become a firm favourite among sportsturf and amenity users.

The range includes four models, from 300 to 800 litres, all equipped with a high-quality 3-cylinder diaphragm pump. The AS300 features manual controls, while the AS400 and above benefit from electric in-cab controls.

A comprehensive standard specification includes 6m folding booms with safety break-back, triple nozzle holders, triple inline filters, an in-tank rinse head, stainless steel induction bowl with can wash, clean water tank, and a clothing locker.

Optional extras include boom extensions to 8m, a hose reel with hand lance, and a foam bout marker.

STARGREEN DM450-700 PRO

The StarGreen Demountable Sprayers are available in two tank sizes of 450l and 700l. They are available to fit John Deere Pro Gator, Toro Workman HDX, and Jacobsen Truckster, making them a favourite with golf courses.

These sprayers are ideal for those who want straightforward British-built reliability, without unnecessary complexity. They incorporate top-quality pumps and controls, and have a very high specification of standard features. What they don't have is any high-tech GPS electronics, making them a simple rugged and reliable option for greenkeepers who want the minimum of downtime.

The standard specification includes 6m folding booms with safety break-back, triple nozzle holders, triple inline filters, an in-tank rinse head, stainless steel induction bowl with can wash, clean water tank, and a clothing locker. Optional extras include boom extensions to 8m, a hose reel with hand lance, and a foam bout marker.

- British designed and built
- Full professional quality
- Comprehensive specification with high-quality pump for consistently even spraying
- Durable zinc primed polyester powder coated finish
- Simple electric control panel, with no complex electronics
- Affordably priced

Trusted by the best in the game

MEGA-MIX

FAST, ECONOMICAL WAY TO MIX YOUR OWN FEED

With the rising cost of liquid concentrate, mixing your own feed from soluble straights can be up to 90% cheaper. But the traditional way of doing this is time consuming and messy, and risks blocking your sprayer jets if not thoroughly mixed.

The Mega-Mix fertiliser mixing station from GreenTek provides a fast, economical way for greenkeepers to mix their own feed.

Mega-Mix enables soluble straights of NPK, Sulphate of Iron, Sulphate of Ammonia etc to be thoroughly mixed without hot water and avoids any messy straining and additional dilution.

Instead, you can thoroughly mix up to 1,200 litres in the tank, using only cold water. The high capacity pump transfers the solution through the filter unit and into your sprayer in just minutes. Then the next load can be mixing whilst you are out spraying the first.

Save hours of messy work and hundreds or even thousands of pounds per year by mixing your own solutions with Mega-Mix.

SPRAYING

Fills and mixes unattended with auto shut-off filler hose

Choice of 5hp Honda engine or 240v electric motor

- Save up to 90% compared with using liquid concentrate
- Save time by spraying whilst the next load mixes
- Minimises sprayer blockages and pump wear with fully dissolved granules
- Safely add chemicals with integral fold-out step
- Inline filter unit prevents nozzle blockages

MEGA-MIX INCREASES EFFICIENCY AT JCB

Since opening in 2018, JCB Golf and Country Club has rapidly established itself as a forward-thinking, premier facility, blending modern course design with innovative maintenance practices. In 2023, Course Manager Callum Wark took delivery of a new Mega-Mix, which Spray Technician Dan Waring has been putting to excellent use ever since.

Dan, who won the Amenity Sprayer Operator of the Year Award in 2024, said: “We got the Mega-Mix at the start of the year. Our main purpose for it was to improve our mixing because we use a lot of granulars for our foliar feed on fairways. We’ve found that using our current method of mixing, we get a lot of separation and granular settlement at the bottom of the tank, which obviously causes nozzle blockages, so we’ve decided to use this.

“It’s improved a lot of our efficiency. It normally takes about an hour to go from spraying the tank out, to actually refilling to get back out again, which for a busy golf and country club, it’s not practical. It’s not feasible for us, but the Mega-Mix is saving us a lot of time. It’s probably saving about half an hour per tank, which when you consider fairways for us is 12 tanks, so it’s going to save us a lot of time on that.

“And another thing is it’s a lot quicker to fill up. We can be in and out within about five minutes from coming back to the shed. So it’s a lot handier on busy golf days. Also, one of the upsides to us is because it mixes so well, we’ve increased our granular inputs. Normally we’re averaging about

two bags per tank on the mix, depending on what the Course Manager wants, but now we’ve actually increased that nearly by two, to double.

“It’s probably saving about half an hour per tank, which when you consider fairways for us is 12 tanks, so it’s going to save us a lot of time on that”

So that shows how good this is at mixing, and we’ve not even had to mix at full revs on the engine to get the agitation that we need to get it mixed properly. So, it’s a great machine, and I can’t wait to use it more to help us develop further on the course.”

With the Mega-Mix fully integrated into the team’s workflow, JCB Golf and Country Club continues

to raise the bar in course maintenance efficiency. The combination of skilled staff, cutting-edge equipment, and forward-thinking management ensures that the course not only meets but exceeds the expectations of its invitation-only guests, cementing its place as one of the UK’s most elite golf facilities.

STARGREEN TD700 DM

The Stargreen range of topdressers are proven and reliable machines, designed and manufactured here in Britain to the highest standard. All models feature a fully welded steel construction, which is shot blasted and zinc primed before being polyester powder coated to ensure a tough and long-lasting finish. Durable stainless steel spreading discs have adjustable vanes for optimum spreading performance.

Not only are these topdressers extremely affordable, but they include many high-spec features and attachments within their basic price.

The TD700 DM is a demountable topdresser to suit the John Deere Pro Gator and Toro Workman utility vehicles. Within its standard specification it includes adjustable belt and spinner speed controls with remote cab operated switching, a hydraulically operated rear flow gate, mounting brackets for the appropriate power unit, and a jackleg kit for safe and easy removal when not in use.

Being truck mounted, the TD700 DM is a highly manoeuvrable and efficient topdresser for use on golf greens and tees, and offers unbeatable quality and value.

- 700 litre hopper with steep sides to avoid sand bridging
- Twin 650mm stainless steel spreading discs with adjustable vanes for optimum spreading pattern
- Cleated conveyor belt for effective sand delivery to the discs
- Hydraulically operated flow gate
- Truck mounting brackets included
- Complete with demount stand kit
- Unbeatable value

STARGREEN TD700 T

The StarGreen TD700T shares the same features as the TD700DM, with the addition of a tractor towed chassis. This makes it ideal for sports clubs and schools etc who prefer to use a compact tractor as the power unit to tow it with.

The TD700T runs on four wheels with 23x10.5-12 turf tyres mounted on pivoting axles to spread the load and minimise compaction. StarGreen topdressers are manufactured here in Britain to the highest standard, and feature fully welded steel construction. They are shot blasted and zinc primed before being polyester powder coated to ensure a tough and long-lasting finish. Durable stainless steel spreading discs have adjustable vanes for optimum spreading performance.

Not only is the TD700T an extremely affordable topdresser, but it includes many high-spec features within its basic price. These include adjustable belt and spinner speed controls with remote cab operated switching, and a hydraulically operated rear flow gate.

- 700 litre hopper with steep sides to avoid sand bridging

EASY-LOAD

Greenkeepers who own the Easy-Load topdressing trailer tell us that they can now topdress “twice as fast, with half the manpower”. By ferrying sand in bulk and reloading your topdresser out on the course, you can keep it working continuously from green to green.

With the Easy-Load you can transport your sand and load it directly into your topdresser without any manual handling. The massive 16” flotation tyres are spaced outside of the body which gives extra stability when you are tipping in the high position.

The Easy-Load is designed to be your ideal all-round three tonne trailer. It is equipped as standard with a dual-purpose tailgate that incorporates a loading chute, and is also top-hinged in the conventional way to enable you to use the Easy-Load for general tipping trailer duties as well as loading your topdresser.

The Easy-Load gives you maximum value from your investment, freeing up staff and eliminating manual handling.

Wheels spaced outside body width provide extra stability for high tipping.

TOPDRESSING

Can also be used as a conventional tipping trailer

- Eliminates manual handling in line with HSE objectives
- Frees up manpower for other important jobs
- Speeds up topdressing so greens are back in play quicker
- Unique design with wheels outside of the body for maximum stability and safety
- Suitable for use with modern spinner type topdressers
- Can also be used as a conventional tipping trailer

Easy-Load	
Unladen weight	1100 kg
Load capacity	3 Tonnes
Body volume	1.83 cubic metres (65 cubic feet)
Body dimensions	2.47m (97") x 1.40m (55") x 0.53m (21")
Overall length	4.45m (14'7")
Overall width	2.32m (91")
Tyres	400/60-15.5 10 ply
Brakes	Hydraulic brakes plus manual parking brake

SWEEP-N-FILL

FILL CORE HOLES FASTER USING LESS SAND

The Sweep-N-Fill Mk3 is the culmination of years of development work, to create the ultimate brush for dealing with heavy topdressings, and filling coring holes. Its two contra-rotating brushes are driven by the ground wheels, giving consistent brushing in relation to your speed of travel.

Its efficiency at filling coring holes enables significant savings in the amount of sand required to fill the holes and restore the playing surface. The brushes themselves float independently to follow the contours of your greens.

The electric lift ram, and height-adjustable tow hitch, enable it to be used with any power unit, from a utility vehicle to a greensmower or bunker rake, allowing you to use the lightest and most manoeuvrable power unit you have available.

Regular brushing with the Sweep-N-Fill lifts lateral shoots and promotes healthier turf. It removes grain and helps to maintain a fast, true, ball roll on putting surfaces, contributing to optimal playing conditions.

Sweep-N-Fill throws the sand upwards to fall straight down the holes

Core holes are filled full, with less sand left on the surface

- Quickly brushes in heavy topdressings
- Fills core holes full in just a few passes
- Grooms greens and removes grain
- Lifts lateral growth before mowing
- Levels infill and lifts fibres on 3G pitches
- Soft flexible contra-rotating brushes
- Lowering the transport wheels disengages the brush drive during transport
- Brushes float to follow contours
- Vertical storage stand saves space in the shed
- Fills divots on tees and approaches
- Ideal for practice range tees

BRUSHING

Also ideal for installing and maintaining 3G pitches

Brushes in heavy dressings with ease

Technical Specifications	
Working width	1.4m (54")
Transport width	1.7m (67")
Weight	181kg

BRITAIN'S FIRST RYDER CUP VENUE, AND THE SWEEP-N-FILL

Moortown Golf Club in Leeds holds the unique distinction of hosting the second Ryder Cup — and the first to be played in Britain — back in 1929.

Designed by Alister MacKenzie in 1908, this heathland/woodland-moorland layout represents one of his earliest and most influential works. It showcases the deep bunkering, strategic design, and undulating greens typical of the architect's style, rewarding thoughtful approach play and strong short-game control.

Today, Moortown remains one of Yorkshire's premier courses. Under the stewardship of Course Manager Steve Robinson, supported by Deputy Course Manager Kevin Fox and the greenkeeping team, the club continues to thrive

— with significant efforts underway to restore and preserve many of MacKenzie's original design features.

Steve had purchased one of the early Mk3 Sweep-N-Fill brushes when they were first introduced to the UK, so when GreenTek took over distribution in 2025, he was an obvious choice to approach for long-term feedback on the product. We met up with him in August during his end-of-summer renovations, and he explained his programme:

"My main role this week is to hollow core our greens to try and dilute the thatch, and then we're

going with a really heavy dressing, putting down around two tonnes per green, and then using the Sweep-N-Fill to brush that sand quantity in. The Sweep-N-Fill was purchase probably 15 years ago, and it's made such a big difference in being able to get that quantity of sand down the holes, whilst being kind to the turf.

"You don't feel like you are being over aggressive, and just letting gravity get the sand down the holes. Because it's got that ability to get it down

"It's made such a big difference in being able to get that quantity of sand down the holes."

the holes, it's not hampering us going forward with so much on the surface, which is the greenkeepers worst nightmare when you're trying to do mowing. The Sweep-N-Fill gets most of it down the holes, and the mowers can crack on and do what they're designed to do.

"The best thing is it does exactly what you hope it will. We've got pretty nice conditions at the moment. It's fairly dry, so you can really push the limits of how much sand you can put down on a green, and this is realistically the only way you can do it."

We are grateful to Steve and his team for their long-term experience and feedback on the Sweep-N-Fill. This was a key factor in our

decision to take up the opportunity to become the new importer of this product, a decision which has since been solidly confirmed by the uptake from GreenTek Key Dealers and end users alike.

GREENS-GROOMER

UNRIVALLED TOPDRESSING PERFORMANCE

The Greens-Groomer, with its quadruple zig-zag brush pattern gives unrivalled sand dispersion for regular topdressing applications. The Greens-Groomer's 16 brushes work the topdressing right down to the base of the sward, and into your coring holes.

The Greens-Groomer therefore, takes less passes, and saves bruising the turf.

The Greens-Groomer 6 has a 1.8m working width, whilst the 3.6m Greens-Groomer 12 doubles your productivity in one go. The extra wings float to follow the contours of your greens, enabling you to quickly brush in topdressing or disperse dew over a full 12' working width, however undulating your greens or fairways are.

The Greens Groomer 12 electric-lift system automatically lowers the wheels and raises the wings for easy transportation without getting off and doing it manually. If you already have the Greens Groomer 6, ask about our upgrade kit to turn it into a Greens Groomer 12.

Easy to use with any power unit, the Greens-Groomer can be towed or tractor mounted.

BRUSHING

Also available to fit tractor linkage

Full 12' (3.6m) working width with automatic folding wings

- Effective topdressing without scuffing or bruising the turf
- 6' to 12' upgrade kit available, twice as wide - takes half the time!
- 16 brushes work the topdressing down into the coring holes
- Available with electric wheel lift or 3pt mounted for compact tractors
- Auto lift folds wing brushes for easy transportation
- Soft or firm brushes available to suit different job applications

0113 267 7000 info@greentek.uk.com

GreenTek

Trusted by the best in the game

SYNTHETIC-GROOMER

MOST EFFECTIVE BRUSH FOR SYNTHETIC TURF

Just as the original Greens-Groomer has long been recognised as the most effective brush ever made for natural turf, Synthetic-Groomer is the equivalent for synthetic surfaces.

The unique patented brush pattern with 16 brushes positioned in a quadruple zig-zag formation prevents tramlines being left on the turf surface.

The rear mounted rake and brush attachment levels out the rubber crumb fill on synthetic pitches. 84 spring fingers mounted in three staggered rows decompact the rubber crumb and lift the grass fibres upright for a groomed playing surface.

Each row of rakes is adjustable, so you can vary their intensity from a gentle combing to a thorough raking.

The Synthetic-Groomer is the most superbly effective tool for maintaining 3G synthetic pitches. A synthetic pitch is a big investment, so it pays to use the best equipment available to prolong its life.

When maintaining an expensive pitch, it pays to invest in the right equipment

BRUSHING

- Unique brush pattern prevents tramlines being left on the turf surface
- 1.8m (6') and 3.6m (12') working widths for grooming large pitches faster
- Adjustable rear rake and brush for rubber crumb filled pitches
- 84 spring fingers lift the grass fibres upright for a totally groomed playing surface

Available in 6' and 12' widths

FLICKER-BRUSH

NON-CHEMICAL SOLUTION FOR WORMCASTS

The new patent-pending 5.3m and 2.2m Flicker-Brushes have been specifically designed to be the solution to the wormcast problem which greenkeepers and groundsmen have been struggling with ever since the banning of Carabendazim in 2017. They take turf brush design to a whole new level which overcomes the tendency that normal brushes have to smear the wormcasts when damp, resulting in muddy looking turf.

The bristles themselves are thicker, longer, and less densely packed so that they pass between the blades of grass, rather than smearing over the surface. The brushes run on castor wheels, with the bristle tips set just lightly skimming the turf. This causes the bristles to flex slightly backwards, then energetically flick forwards repeatedly as the brush moves over the turf, shattering the wormcasts and dispersing them without smearing.

Available as a 5.3m triple brush for golf fairways and larger sports complexes, or a 2.2m version for sports pitches, both models share the same uniquely effective brush technology.

- Shatters wormcasts without smearing
- Reduces mud build-up on mower rollers
- Saves blunting and regrounding blades
- Lifts nap for a cleaner cut
- Saves time, money, and maintenance
- Ideal for topdressing and dew dispersal
- Save thousands of pounds on "soil conditioners"

BRUSHING

Hydraulically folded in for transport or topdressing

The Flicker-Brush 2.2m is ideal for single pitches and outfields

FLICKER-BRUSH SOLVES WORMCAST PROBLEM AT WETHERBY GOLF CLUB

Darren Morris, Course Manager at Wetherby Golf Club, explains why they were ideally placed to trial the new 5.3m Flicker-Brush throughout its development.

"We had two main reasons for utilising the new fairway brush that GreenTek have developed. One has been to improve sward density on our fairways, and the other has been to disperse worm casts, which, as we know, are becoming more and more of a problem for every golf course in the UK.

"We have been having issues over the last three years because we have reverted back to mowing our fairways 50:50. This is causing us quite a few issues with the members. At present they are complaining about washboarding or ribbing on the fairways. Utilizing the new brush from GreenTek, this has dramatically improved the sward density and the cut quality of our fairways. So much so, that we now brush before we cut, and we are getting a 50% more yield per cut than

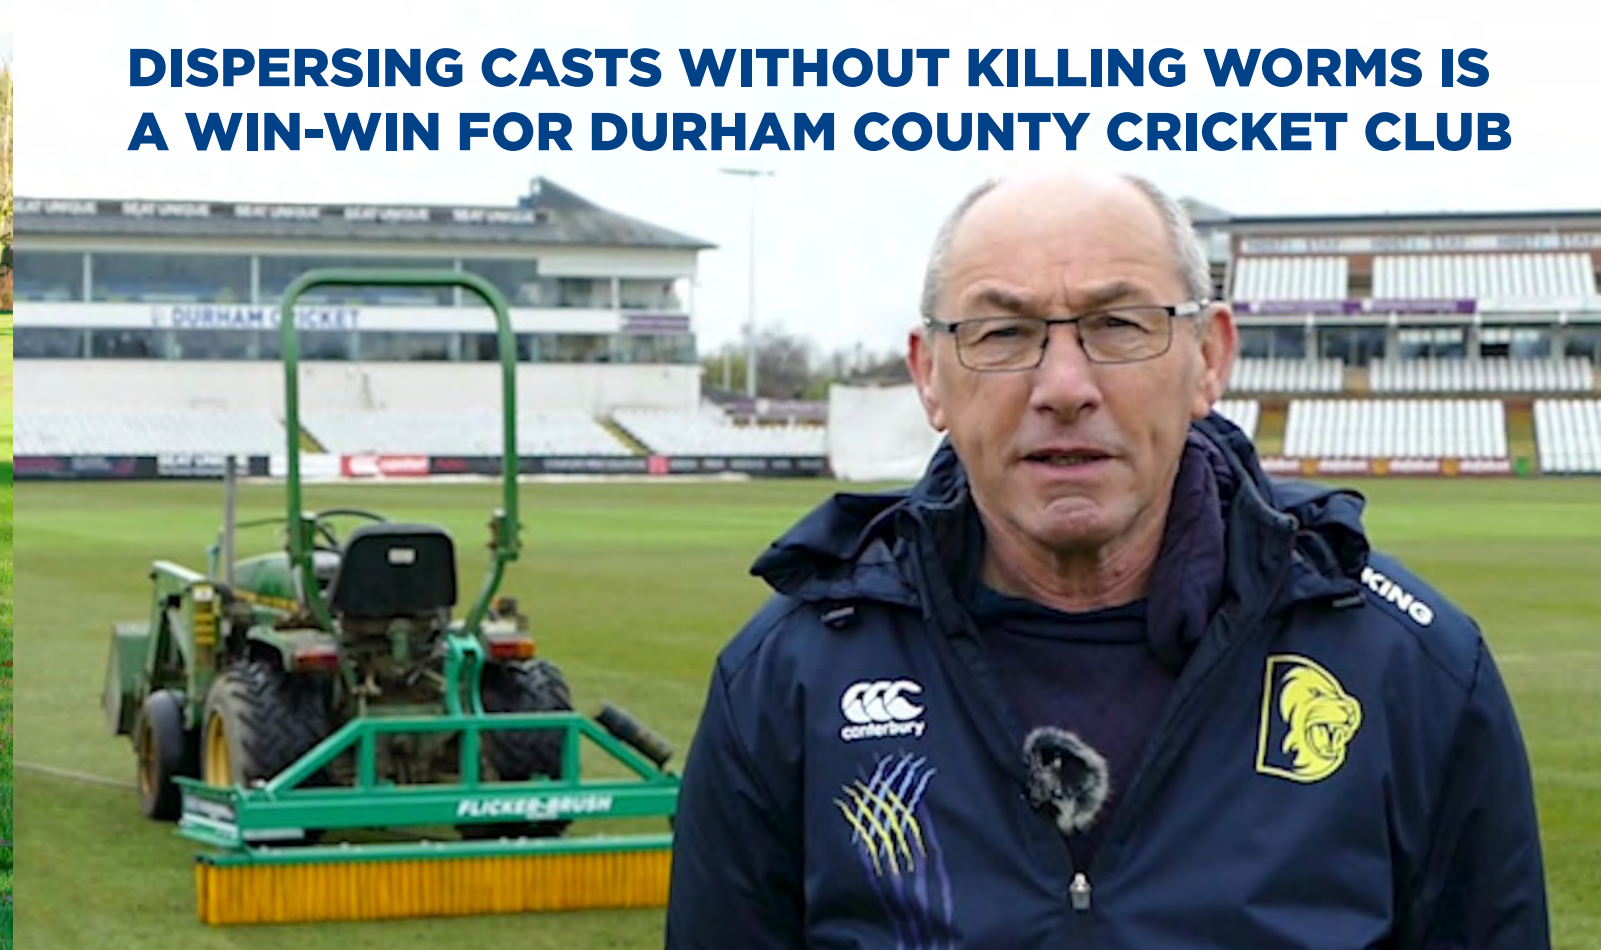

"this has dramatically improved the sward density and the cut quality of our fairways"

we were doing before." Darren explained that this had enabled him to reduce fairway mowing from three to two cuts per week.

He continued, *"The biggest problem we have is when we get into the autumn season we start to struggle with worms. At Wetherby Golf Club, since 2015 we have had eight consecutive floods. This has pushed the nutrient content in our sward through the roof. So worm activity for us is absolutely diabolical in winter, so much so that we do actually stop cutting our fairways in November. The reason that we do this is to try and stop the damage to our cutting units, and obviously it reduces the amount of time we have to spend back-lapping or resharpening cylinders.*

"The results so far have been very, very encouraging, especially worm cast dispersal"

DISPERSING CASTS WITHOUT KILLING WORMS IS A WIN-WIN FOR DURHAM COUNTY CRICKET CLUB

Having read about the new 5.3m Flicker-Brush, and its ability to shatter worm casts without smearing, Vic Demain, Head of Grounds at Durham County Cricket Club, approached us and asked if we could produce a smaller version specifically for cricket outfield. A prototype 2.2m version was duly manufactured, which Vic immediately tested, and here gives us his verdict on.

"One of the biggest problems that all groundsmen have now due to the eradication of chemicals is worm activity, and it's getting worse and worse, particularly with these wetter winters we've had. One thing that I've been looking at is using the GreenTek Flicker-Brush, which has actually been great for us, because every other sort of brush that we've used just smears them. Whereas the Flicker-Brush, because of the way it's designed, it tends to break the worm cast up.

"But not only that, if we're cutting our outfield they dull our mowers off in no time, and it's costing us a fortune in sharpening the machines. So the Flicker-Brush, breaking up the worm cast actually disperses them, and means that we're actually cutting grass rather than cutting soil.

There are, of course, various products on the market which are supposedly able to control worms. I'm talking mainly of soil conditioners.

"I actually still want the worms in the ground. They do a lot of good for the earth"

You can't put down sprays now to eradicate worms, which is, in my opinion, a good thing because I actually still want the worms in the ground. They do a lot of good for the earth, in that they give natural aeration and they eat up some of the thatch. So I actually want them, I don't want to kill the worms. What we're finding with the Flicker-Brush is, yes, we will always have the worm casts, but the Flicker-Brush enables us to break those casts up, to carry on mowing, and to present the ground in the best possible condition.

"So for us it's a great tool, but I think not only at this level of cricket, I think even in a village club, if people were able to access one of those, it would save a heck of a lot of time and help them all."

MULTI-BRUSH

FAST, EFFICIENT BRUSHING

Brushing turf is the most effective way to stand up the grass, disperse dew and work-in topdressing.

With the Multi-Brush you can brush all the fairways on an 18 hole golf course in two hours thanks to its massive 5.4m (18') working width.

The three independently floating heads with unique double-jointed lift arms enable the Multi-Brush to flow over undulations like nothing else can.

An additional benefit of brushing is that you can follow straight over with your fairway mower, leaving an evenly dispersed cut without clumps of wet clippings everywhere.

Plus, at the touch of a lever, the Multi-Brush effortlessly transforms itself into a supremely effective 1.8m topdressing brush.

Dispersing dew reduces risk of fungal disease

BRUSHING

Folded in it becomes a highly effective topdressing brush

- Massive 5.4m (18') working width for efficient brushing
- Three independently floating heads follow contours
- Hydraulic folding for ease of transportation between fairways
- Rapid dew removal for clump free mowing
- Versatile brush can be used to work-in topdressing
- Choice of firm yellow or soft blue brushes

Multi-Brush		
Working width	Transport width	Weight
5.4m (18') or 1.8m (6')	2.1m (7')	240kg

MAXI-BRUSH

BRUSH YOUR WAY TO HEALTHY TURF

Brushing turf is the best way of working-in topdressing, and dispersing dew to help prevent fungal diseases such as fusarium.

The Maxi-Brush is a triple section 5.4m (18') wide brush, which also quickly adapts to a six row 1.8m (6') wide topdressing brush.

This versatile brush comes with manual folding for general sports field use. For golf courses, the optional hydraulic folding provides ultimate ease and efficiency for transport between fairways.

With a working width of 5.4 metres, it is possible to brush a whole golf course or multiple sports pitches on a daily basis for pristine presentation. You can also use the Maxi-Brush before mowing to disperse dew for a clean cut with no grass clumps.

An economical and versatile piece of equipment, you can also add the Sarel-Roller and Rear Brush Cassette into the same Maxi-Brush frame, for effective greens aeration and dew brushing in a single pass.

Can be used with lightweight compact tractors, or with utility vehicles by using the Multi-Mount adaptor frame.

BRUSHING

- Disperses dew to help prevent fusarium
- 5.4m working width for rapid daily brushing
- Six 1.8m brushes for topdressing
- Easy and quick to use and transport
- Also suitable for maintaining synthetic turf
- Can be used with compact tractors or utility vehicles

Quickly adapts into a six row topdressing brush

Ideal for quickly brushing sports pitches

Sarel-Roller Cassette with Rear Dew Brush fits into the same Maxi-Brush frame.

Maxi-Brush			
	Working width	Transport width	Weight
Triple brush with manual folding	5.4m (18')	1.8m (6')	150kg
Triple brush with hydraulic folding kit	5.4m (18')	2.34 (7' 8")	180kg
Sarel Roller kit fitted to main frame	1.6m (5' 3")	1.8m (6')	135kg
Rear Dew Brush kit	1.8m (6')	1.8m (6')	8kg

QUATTRO-QUICK

EASIER AND FASTER PITCH PREPARATION

The Quattro-Quick can operate up to four attachments at once, and comes fitted with a Star Slitter, a Spring Rake, a Roller and a Brush. This provides a combination of surface aeration and grooming, plus rolling and brushing, to create healthy playing surfaces with smart presentation.

The Quattro-Quick is specifically intended to meet the needs of busy groundsmen with limited time availability. The Quattro-Quick is therefore designed to be exceptionally simple and quick to set up and use.

The working position of each attachment can be instantly adjusted by means of a single height adjustment lever, making it very easy to operate by groundsmen of all levels of experience.

ELIGIBLE
FOR FOOTBALL
FOUNDATION
GRANTS

- 4-in-1 Implement System can be configured for natural or synthetic turf
- Star Slitter, Spring Rake, Roller and Brush attachments
- For healthy, aerated, groomed and presented turf
- Easy single-lever height adjustment
- 1.8m width

Quattro-Quick	
Working width	1.8m (6')
Weight	350kg

AERATION & MAINTENANCE

A single-lever height adjuster for each implement enables quick and easy set up

The Star Slitter aerates the surface to provide entry for air, water and nutrients

The Spring Rake is adjustable for intensity of grooming and thatch control

AERO-QUICK

EFFECTIVE AERATION FOR COMPACTED TURF

Healthy turf needs air, so the compaction caused by regular play needs relieving with regular aeration. The Aero-Quick 1.5m aerator opens up the soil's structure and allows the turf to breathe and drain freely.

With a wide range of interchangeable attachments and a variety of slitting tines of varying depths, you can choose the right tools for maximum effectiveness on different types of sports turf from golf greens to football pitches.

The built-in weight tray allows you to add further ballast for maximum penetration. And the rear roller with rake and brush attachments enables you to carry out four operations in one go. Slit, roll, rake and brush all at the same time to create a perfectly groomed and striped finish in a single pass.

The Aero-Quick's full 1.5m (5') working width covers the tracks of most tractors up to 35hp. The versatile Aero-Quick weighs only 240kg, making it light enough to use on a compact tractor or utility vehicle fitted with the Multi-Mount adaptor frame.

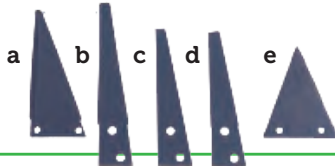

Wide range of interchangeable attachments

Slit Tinners

A range of slitting depths from 5" to 8 1/2" for maximum effectiveness on all types of sports turf.

- a: 8 1/2" Outfield
- b: 8" Outfield
- c: 6" Outfield
- d: 6" Fine Turf
- e: 5" Fine Turf

Hollow Corer

Removes plugs of soil, enabling the ground to expand and decompact. Also creates air channels to assist in the breaking down of thatch.

Disc Slitter

Continuous slits give maximum air and water absorption, and prune the grass roots to stimulate vigorous new growth.

Rear Roller, Rake and Brush

Use to carry out multiple tasks at once.

- Wide range of slitting tines for maximum effectiveness
- Slit, roll, rake and brush in one go to save time
- Full 1.5m working width covers the tracks of most tractors up to 35hp
- Relieves compaction and opens up soil structure to allow the turf to breathe and drain
- Fits to compact tractors and popular utility vehicles

With the Rear Roller, Rake, Brush attachment fitted it becomes a combined deep aerator and 4-in-1 groomer, all in one

DOUBLE-QUICK

HEAVY-DUTY INTERCHANGEABLE TURF MAINTENANCE SYSTEM

For contractors, councils, and large sports areas that need deep aeration and maximum efficiency, the Double-Quick is the stand-out favourite. With working widths up to 2.4m, and the capability to do four tasks at once, it offers unmatched productivity.

The heart of the system is the unique Main Frame, which carries two attachments of your choice, mounted one above the other. Change from Deep Slitter to Ballast Roller for example, by inverting the Main Frame and re-attaching to your tractor.

And thanks to the Double-Quick's all-in-one Rear Roller, Rake, and Brush attachment you can do all four operations every time you aerate, with just one tractor and operator.

Mix and match your attachments to suit your needs with a choice of slitters and corers for effective aeration, rollers for a smooth surface, rake for better air circulation and brush to leave a professional striped finish.

Mix and match your attachments to suit your needs

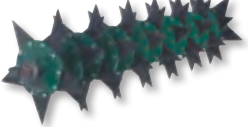

Deep Slitter

Closely spaced 8½" tines give a dense pattern of aeration for heavily used winter games pitches and fairways.

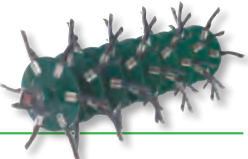

Fine Slitter

Even closer spaced 5" tines to prevent surface sealing and increase the absorption of air, water and fertiliser.

Hollow Corer

Removes plugs of soil, letting the ground expand and decompact.

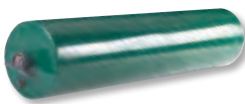

Disc Slitter

Continuous slits give maximum air and water absorption and prune the grass roots to stimulate vigorous new growth.

Ballast Roller

Fill with water for maximum effectiveness or use empty for a light rolling.

Rear Roller

For firming back divots after slitting.

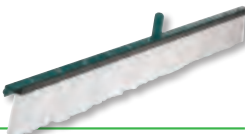

Scarifying Rake

Attach to the Rear Roller for fast effective thatch control as you go.

Rear Brush

Attach to the Rear Roller to leave a well groomed appearance.

Roll over Main Frame to interchange attachments

1 Remove pins holding top guard and rear attachment.

2 Attach tow cable to tractor and Double-Quick.

3 Drive tractor forward to roll Double-Quick over.

4 Re-attach to tractor and replace top guard.

- Effective aeration for heavily used winter games pitches and fairways
- Stimulates deeper roots which resist drought in summer
- Four operations in one go with no extra manpower
- Double mounted attachments to save time changing over in the field
- Exclusive design to GreenTek

AERATION & MAINTENANCE

SAREL-ROLLER

THE EFFECTIVE SOLUTION FOR SEALED TURF

- Quickly and effortlessly creates thousands of small holes
- Immediate brushing disperses moisture, reducing risk of fusarium
- Working width of 1.6m to spike all your greens in just a few hours
- Reduces the need for wetting agents
- Use before and after overseeding to increase germination rate
- Attaches to compact tractors and utility vehicles for ease of use

The combination of dry summer weather, dust, and foot traffic can cause turf surfaces to seal over, preventing water and essential nutrients from being absorbed into the root zone, and causing puddles after heavy rainfall.

Sarel-Rolling followed by immediate brushing is your solution to survive droughts and downpours.

The Sarel-Roller spikes the surface with thousands of small holes. The brush then sweeps the dew down the holes into the root zone to conserve moisture in dry periods. And when it rains, you will have an open surface that drains freely.

The Sarel Roller and Brush combination aids effective irrigation, and can help to significantly reduce your expenditure on wetting agents.

Economical and versatile, the Sarel-Roller is ideal for use before and after overseeding to increase the germination rate. Plus you can also fit the Maxi-Brush brushes onto the same Sarel-Roller frame for daily brushing to disperse dew.

Attaches to compact tractors, or uses the Multi-Mount adaptor frame to quickly attach to your utility vehicle.

WATCH THE VIDEO

MULTI-SAREL

THE WORLD'S WIDEST SAREL ROLLER

- Keep your turf breathing and draining to reduce the risk of fusarium
- 5.4m working width for rapid coverage of large areas
- Used folded in for intensive overseeding preparation
- Optional rear brushes groom your turf while you spike.

Sarel rolling is recognised as a highly beneficial turf treatment. It keeps the turf surface open so that it can breathe and drain, and nutrients can be absorbed.

Thanks to its large 5.4m working width you can do regular surface aeration quickly and efficiently with the Multi-Sarel.

By spiking thousands of small holes, the Multi-Sarel quickly creates well-drained and freshly aerated turf. Preventing surface sealing in one pass, and even over undulating ground.

The Multi-Sarel has three separate units which fold out hydraulically to give a massive 5.4m working width. It can also be used folded in with all three rollers in line, which gives an intensive pattern of aeration, and provides the ideal preparation for overseeding.

Rear brush attachments are also available so that you can spike and groom at the same time, leaving your pitches healthy and immaculately striped.

Units can also be used folded in for intensive overseeding preparation

Optional rear brushes groom your turf while you spike

AERATION & MAINTENANCE

MULTI-ROLLER

QUICKLY RESTORE PLAYING SURFACES

- Three separate rollers follow undulations
- Hydraulic folding for quick and easy operation
- Fits to mid-size compact tractors
- Quickly restores the surface of your pitches
- 5.4m working width to roll a full pitch in approximately 20 minutes
- Quickly restore the surface between games

The Multi-Roller has been designed for large areas of turf that require regular light rolling.

Specially developed to meet the needs of football academies and sports complexes with multiple pitches, to restore the surface between games. It is also ideal for rolling golf fairways.

The massive 18' (5.4m) working width makes it possible to roll a full pitch in approximately 20 minutes.

Multi-Roller's three separate rollers follow undulations for effective rolling. And the hydraulic folding arms enable easy transportation between pitches.

Lightweight at only 650kg, the Multi-Roller can be attached to a mid-range tractor for rapid rolling. The secret of its effectiveness is that the small diameter rollers give a greater rolling pressure for their weight than large diameter rollers would do.

The three rollers can be used in-line for intensive rolling

MULTI-MOUNT

EASY TURF MAINTENANCE WITH YOUR TRUCK

Quick and easy attachment

- Fits all popular utility vehicles
- Quickly and easily change attachments
- Durable heavy-duty construction
- The same frame can be reconfigured in future to suit different utility vehicles

By using the Multi-Mount adaptor frame, you increase your power unit options for GreenTek attachments to include utility vehicles.

The Multi-Mount is a universal frame which can be configured to fit all popular utility trucks.

Suitable for the Toro Workman, John Deere Pro Gator and Cushman Truckster, Multi-Mount enables you to attach the Aero-Quick, Maxi-Brush and Sarel-Roller to any of these power units.

Aero-Quick and Multi-Mount on a Toro Workman

Sarel-Roller and Multi-Mount on a John Deere Pro Gator

AERATION & MAINTENANCE

TURF-CONDITIONER

ECONOMICAL DETHATCHING FOR HEALTHY TURF

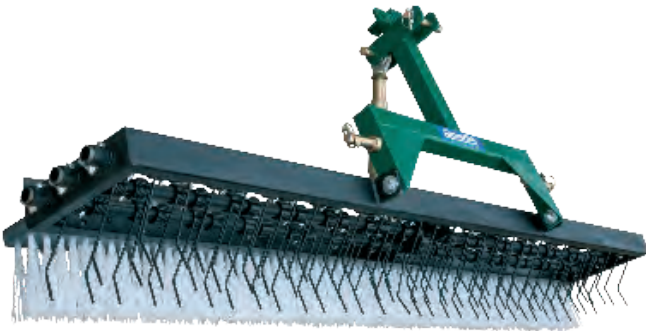

Raking helps stimulate healthy growth, removes thatch, and lifts the grass up before mowing to prevent nap. The Turf Conditioner is a highly effective way to rake your turf. It has three adjustable rows of spring tines, each of which can be individually adjusted to achieve the exact degree of raking required.

With the adjustable stiff rear brush you can groom the surface of your turf to leave a beautifully striped finish at the same time.

Available in two sizes, Turf Conditioner 6 offers a 1.8m working width, whilst Turf Conditioner 12 has a generous 3.6m working width, enabling you to save time covering your fairways or pitches.

Turf Conditioner 12 with folding wings

3 rows of adjustable rakes and rear brush

Turf Conditioner 6

AERATION & MAINTENANCE

- Available in 1.8m or 3.6m working widths
- Three adjustable rakes lift out thatch and debris
- Adjustable rear brush leaves a beautifully groomed and striped finish
- Enables air to circulate around the grass better, reducing the risk of fungal disease
- Fits to any tractor, or to utility vehicles with the Multi-Mount frame

DYNA-ROLLER

NEW ROLLER UNITS WITH DOUBLE VIBRATORY ACTION

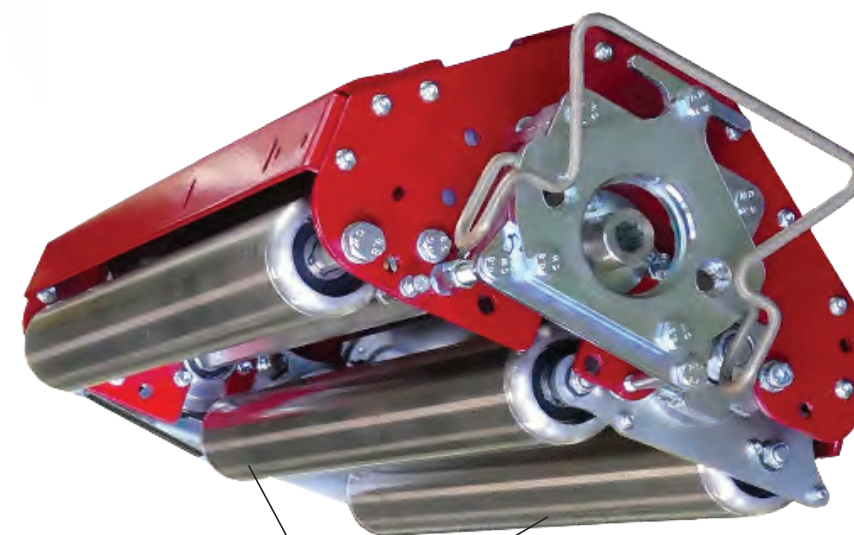

The new Dyna-Roller units represent a major advance in vibratory roller technology. By utilizing twin vibrating rollers, they deliver a double-rolling effect in a single pass, improving efficiency and surface consistency.

Quick and easy to mount on any popular greens triplex, they provide a far simpler and more effective alternative to sidewinder-type rollers. Greens can be rolled in straight, uniform stripes, with all three units accurately following the contours of the surface—just as your mower does. Transport between greens is fast and comfortable, with no need to tow a trailer behind a utility vehicle.

An additional benefit is their ability to vibrate topdressing into the turf canopy. This action helps work material deeper into the sward, reducing mower blade blunting and preventing topdressing from bridging over coring holes.

Economical Solution

With redundant greensmowers often offering minimal trade-in value, permanently fitting one with Dyna-Roller units is a highly practical and cost-effective option. The result is an exceptionally economical, purpose-built ride-on roller for modern greenkeeping operations.

Twin vibrating rollers

- Three individual 22" roller units
- Follow your greens' contours just like your mowers do
- Roll straight stripes that match your mowing width
- Quick to use and to transport from green to green
- Vibrate-in topdressing without bridging over coring holes
- The most operator-friendly way to roll your greens

DYNA-SEEDER Mk2

FAST, PRECISE OVERSEEDING FOR OPTIMUM GERMINATION

The Dyna-Seeder is now firmly established as a must-have tool for progressive golf clubs. It gives greenkeepers direct control over sward composition, allowing overseeding with the desired species whenever conditions are right.

Mounted to a greens triplex, the Dyna-Seeder is fast, highly manoeuvrable, and can quickly reseed greens—even while the course remains in play.

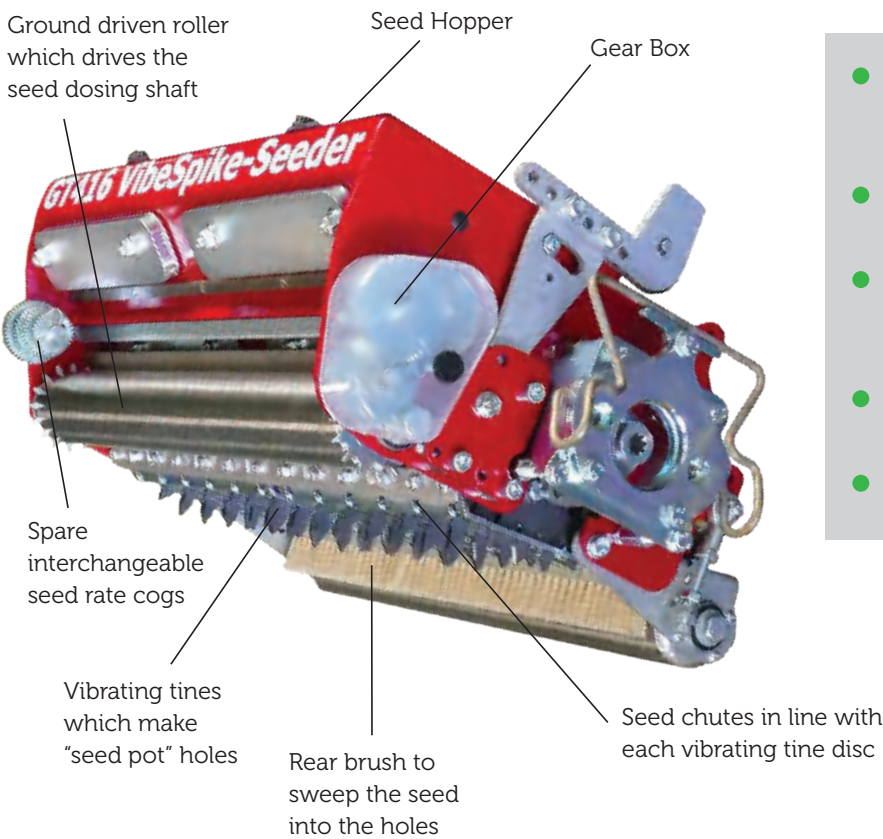

New Mk2 benefits

A key advantage of the Dyna-Seeder units is their ability to operate at very low seeding rates, delivering significant cost savings when using premium bent seed. Now with the introduction of the new Mk2 model with optional alternative dosing shafts, rates can be selected down to 5.4 gsm with the standard bent/fescue shaft, and as low as 1.4 gsm with the optional pure bent shaft.

How the Dyna-Seeder works

The vibra-spiker creates thousands of clean, open holes while seed is accurately metered at the most economical rate. Seed ducts aligned with the spiking discs enable the rotating spikes to push the seed directly into the soil.

The result is excellent germination, and fresh, dense growth on your greens.

- Accurate seed metering without wind drift gives even growth and reduces wastage
- Seed is brushed into holes to maximise germination
- Overseed 18 greens in just a few hours, no need to close any greens
- Discrete overseeding leaving instantly playable surfaces
- Fitted to your triplex in minutes

SUMMER OVERSEEDING AT SCARCROFT GOLF CLUB

Scarcroft Golf Club is a highly regarded 18-hole parkland course located on the outskirts of Leeds. It resides in an area noted for some of Yorkshire’s finest golf courses, along with neighbouring Alwoodley, Moor Allerton, Moortown, and Sand Moor, to name but a few.

Matt Houseman has been at the club for 23 years, 15 of them as Head Greenkeeper. Whenever we call on him, he invariably speaks of the success he has had with his Dyna-Seeders. Over the past 10 years he has successfully increased the bent content in the greens, which has made them more disease tolerant and greatly reduced his dependence on fungicides.

A quick roll with mowing units after seeding provides a smooth putting surface

One summer’s day we caught up with him and his team out on the course, overseeding. It was a competition day, but because of the speed and minimal disturbance of the Dyna-Seeders, they

were able to overseed the greens ahead of the golfers without affecting the putting surface.

Matt explained “We’ve had the Dyna-Seeders for about eight years now. What we found is that before we had them, we were overseeding and getting about 30% uptake. But with the use of the Dyna-Seeders, we reckon that’s increased to between 70% and 75%, possibly even more. Two to three weeks after, we can see distinct lines of

Greens were visibly fast and true after seeding

“probably the biggest impact of any machine that we’ve bought in the last decade”

new seed coming through, which is obviously very pleasing. We’ve been overseeding now for, I think this is our eighth year, two to three times a year at about 5g/m².

“When overseeding is required we don’t have to worry about upcoming competitions as there is very little surface disruption to the playing surface. We then chose to run the greensmower over it after the application of the seed, with no boxers on, just to lightly roll the surface. And as

you can see, it’s left the greens perfectly playable in a fantastic condition.

“It’s a piece of machinery, with probably the biggest impact of any machine that we’ve bought in the last decade, to give you an idea of how impressed we are with the Dyna-Seeders.”

Watching players putt on the freshly overseeded greens, with no complaints at all about the surface, confirmed just how little disturbance the Dyna-Seeders create.

DYNA-CORER

FAST AND DISCRETE MICRO-CORING FOR YEAR-ROUND AERATION

Aeration is vital for healthy turf; reducing compaction and allowing air, water and nutrients to reach the root zone. However, hollow coring can be slow and labour intensive; it disrupts play, and disturbs the playing surface.

The innovative Dyna-Corers enable you to aerate your greens throughout the season with their micro-coring process.

The micro tines of the Dyna-Corers remove thousands of tiny core plugs, producing small neat holes, closely spaced for minimal disturbance to the playing surface.

Coring depth can be precisely adjusted down to a maximum of 25mm. A range of interchangeable tine options include cross tines for decompacting hard areas, needle tines, and slitting blades.

Quickly fitted to your triplex, the Dyna-Corers have a working width of 1.5 metres. Their rapid action enables you to micro-core a green in minutes, minimising disruption to play.

The integral core-collector effectively sweeps the plugs to the edge of the green for removal. Then just a quick blow or brush and your green is ready for play again.

Wide range of hollow, solid, cross and slitting tines

Dyna-corers fit to all popular greensmowers

- Minimal surface disturbance – no disruption to play
- Working width of 1.5 metres to micro-core all your greens in just a few hours
- Coring depth can be precisely adjusted down to 25mm
- Prevents surface sealing to enable air and water to reach the root zone
- Regularly remove thatch all year round, even in dry weather
- Quickly attach to your triplex for discrete coring

GREENSMOWER ATTACHMENTS

INVESTIGATION...

CAN MICRO-CORING THROUGH WINTER AVOID THE NEED FOR A FULL SPRING RENOVATION?

Bruce Jamieson brings decades of green-keeping expertise to this investigation. Formerly Course Manager at Royal Porthcawl and later Director of Agronomy for the PGA European Tour from 1988 to 1995, he has spent the past 30 years working as an independent golf course consultant.

Drawing on this extensive experience, he was commissioned by GreenTek at the end of 2022 to assess whether monthly micro-coring with the Dyna-Corers could effectively reduce organic matter levels during the winter months, and potentially lessen the need for disruptive spring renovations.

monitored the performance of the Dyna-Corers across three types of greens—an older push-up green (now rebuilt) and two of the modern sand based greens—evaluating both agronomic impacts and playability. Here, Bruce and Matt share their observations from the trial:

Bruce: *"We had three different types of greens. To start with, we took tests from three greens, one push up, one 1999 green, and one 2015 green, and had the tests analysed by ETL in Scotland for organic material. Having got those results, we then started a program of every month through the winter of '22 to '23, taking out cores with the Dyna-Corers, and at the end of that period of six*

operations we tested the greens again and found that the results we had achieved were what we had hoped to achieve on the sand based screens." An average of 17% reduction in organic material was recorded on the sand based greens.

Matt: *"The use of the Dyna-Corers allowed us to aerate through the winter time, and what we did find was, especially after a number of applications, is that the surfaces became firmer. And going through all winter, even on the old green, we still found by the end of the winter that the green was a lot firmer than we were expecting. It worked well. We didn't bother doing a spring renovation. We waited to see how it was, and then looked at the results from there on. So after the last of the spring operations we discussed it at Greens committee, and then we decided that it was such a successful operation that we purchased the Dyna-Corer units, and we've been using them through the winter times ever since."*

Bruce: *"What we've also found as a club, that having done that, the spring renovation is minimal. We can go in with solid tines in the spring, with top dressing, and overseeding, and the members get the greens in better condition, come Easter time, than they would have done if we were doing a large hollow core operation going into that period. Because weather can be a bit unpredictable at that time of year."*

Matt: *"And also, even through the winter time, we were able to do the operation, clear away the debris, and then roll each green as we finished. And the members felt no disturbance or disruption for their playing through the winter time."*

Dyna-Corers enable year round aeration

Conclusion

The winter micro-coring programme at Hartley Wintney GC demonstrates that consistent, low-disruption aeration can significantly reduce organic matter, improve firmness, and maintain member satisfaction—all while avoiding the need for a major spring renovation. By spreading maintenance throughout the quieter winter months, the club not only preserved surface quality but also ensured better-playing conditions earlier in the following season. This trial suggests that, for many courses, adopting a structured winter micro-coring regime could offer a more efficient and golfer-friendly approach to managing organic matter, and preparing greens for the competitive spring period.

WATCH THE VIDEO

Matt Rolls, course manager

Hartley Wintney Golf Club was selected for the trial, where Bruce collaborated closely with Course Manager Matt Rolls. Together, they

DYNA-SPIKER

POWER SPIKING FOR COMPACTED SURFACES

The Dyna-Spiker produces neat deep slits and an undisturbed surface

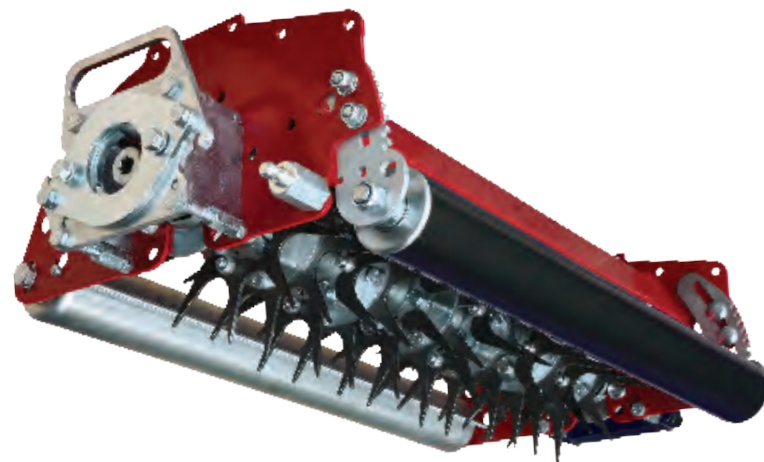

When golf greens become hard in summer drought conditions, even sarel rollers struggle to penetrate deep enough to enable air, water, and wetting agents to penetrate the root zone.

Dyna-Spikers are the solution. Using a powered, vibratory action, their spiking or slicing blades are driven through even the hardest surfaces and deep into the root zone.

Adjustable to a maximum depth of 35mm and fitted to your triplex in minutes, the 1.5 metre working width means you can get superior aeration across all your greens and tees in only a few hours.

That's fast and effective aeration and the minimum of disruption to playing surfaces. No need to close the greens, and surfaces are immediately playable.

- Penetrates when even sarel rollers can struggle to work
- Use year-round and leave immediately playable surfaces
- 1.5 metre working width enables aeration of all greens and tees in only a few hours
- Control the depth of spiking down to 35mm
- Fitted to your triplex in minutes
- Star spike or slice to get the aeration you want

DYNA-BRUSH

COLLECT UP WORMCASTS AND STUBBORN DEBRIS

Effectively collect up wormcasts, micro cores, and debris

When you want to collect up wormcasts and other loose debris from greens, tees, surrounds, and approaches, Dyna-Brushes are in a league of their own.

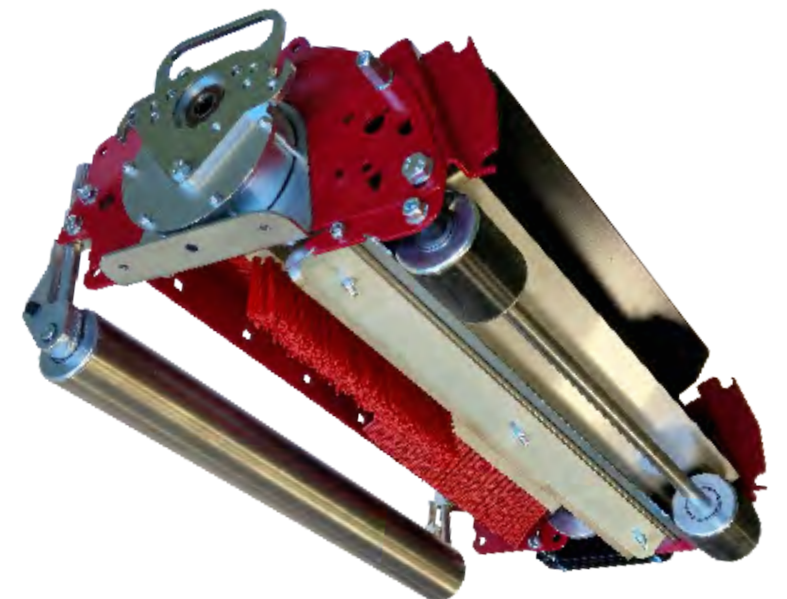

The reverse-drive gearbox rotates the brushes the opposite way to the direction of travel, effectively flicking-up aeration cores, as well as stubborn debris like leaves or pine needles, and collecting them all in the dedicated collection boxes.

The contra-rotating brushing action also stands the sward up before mowing to give a much cleaner cut.

Fitted in minutes to your triplex, the three Dyna-Brush units cover a width of 1.5 metres which means you can brush at the same speed as you would mow, covering a green in minutes and the whole course in a few hours.

Dyna-Brushes deliver a whole new level of finesse to your greens presentation.

- Excellent for removing wormcasts from greens, tees, surrounds and approaches
- Sweeps up mini-cores and stubborn debris like leaves and pine needles, leaving an immediately playable surface
- Contra-rotating action stands up the grass sward for a cleaner cut when mowing
- Fitted to your triplex in minutes

PREPARING ROYAL BIRKDALE FOR THE OPEN

When we caught up with Sean McLean, Course Manager at Royal Birkdale Golf Club, it was early October 2025. This was their maintenance week, and the course was partially closed to allow for an intensive renovation program across the championship links.

Having taken over the role only three years ago, Sean is facing the task of preparing one of golf's most iconic venues for the 154th Open Championship, only nine months away. Yet, he's quick to stress that the work being carried out goes far beyond Open preparations. "We're doing

Checking the depth of scarification

a lot of procedures ahead of the Open next year," he explains, "but it's also for general play. It's not just targeted at the Open. It'll be something that we'll be looking to do annually going forward."

Sean outlines the scope of this autumn's renovation programme:

"Starting off with verticutting and brushing, using the GreenTek units. And then following on from

"We're doing a lot of procedures ahead of the Open next year, but it's also for general play."

that, this week it's been scarifying to target the top 7mm in the profile".

Using a plug cutter, he inspects a core from the green and decides to take the Thatch-Away Scarifier Cassettes another millimetre deeper. Four clicks of the Set-by-Feel adjusters later, and the greensmower is back in action — a small adjustment, but one that makes all the difference.

The renovation continues with further processes to reduce organic matter, including deep-tine aeration with solid tines, followed by micro-coring with Dyna-Corer units. Next comes seeding with a fine fescue mix, applied using their Dyna-Seeder units.

This is followed by a once over with a pedestrian solid tine aerator set at a shallow depth to punch even more potholes for the seed. "Following on from that it's been a heavy topdress, and then work all the material into the surface and help

dilute that top profile. So, yeah" he concludes, "all these products have been good, and all these inputs have been a great help for carrying that out".

Overseeding with fescue mix

Already, the first of the R&A cabins has appeared beside Birkdale's famous clubhouse, signalling the early stages of Open Championship preparations. Among the greenkeeping team, the talk has turned to the well-drilled operation that soon unfolds as Europe's premier golf event moves in.

But the man at the centre of it all remains calm and measured. For Sean McLean, this is simply business as usual — maintaining Royal Birkdale to the highest possible standard, for members, guests, and the world's best players alike.

Removing organic matter from the top 20mm

THATCH-AWAY

THE WORLD'S NO.1 GREENS CARE SYSTEM

Keeping your greens in top condition needs your knowledge and expertise, but it also needs the right tools.

Thatch-Away Supa-System is the original revolutionary turf maintenance system for greens triplexes, trusted by the best greenkeepers in the world for creating perfect playing surfaces and maintaining firm, fast and smooth greens.

Turn your triplex into a total greens maintenance tool in minutes. With a choice of 12 different cassettes to verticut, scarify, groom, slit, brush, roll and spike, you have the perfect system for your greens.

The performance of the tungsten tipped verticutters is unrivalled. Nothing matches Thatch-Away's ability to surgically remove and collect up thatch, leaving a beautifully groomed and immediately playable surface.

With precision height adjustment in 0.25mm increments, you control the intensity of each operation, allowing you to use your Thatch-Aways to optimum effect throughout the year.

Wherever you are in the world, Thatch-Away is effective on every sward composition whether you have a links, heathland, or parkland course.

Fits all popular greens mowers

Thatch-Away – does exactly what it says!

- Tungsten tipped blades stay sharp for many years
- Finned blade spacers vacuum up cuttings for the cleanest thatch removal
- Precise cutting control with Set-by-Feel micro height adjusters
- Quick-Lock enables cassettes to be safely changed in seconds
- Choice of 12 cassettes to build your own greens care system
- Turn your triplex into a total greens maintenance tool!

GREENSMOWER ATTACHMENTS

MICRO-GROOMERS PROVIDE EXTRA PACE FOR SCOTTISH BOYS OPEN

Looking for the next level of refinement in your greens to create even faster and truer putting surfaces?

Micro-grooming is the ultimate in sward refinement, there's nothing else like it.

Laser-engineered blades with over 2,000 extra fine tungsten tips work in the upper leaf area. Spaced at just 6.5mm apart, they deliver approximately 39,000 surgically precise micro-cuts per square metre.

They effectively enable you to do a double-verdict in a single pass, halving your fuel and labour cost.

Set-by-Feel height adjusters offer precision control to accurately adjust cutting height by 0.25mm.

When we visited Peebles Golf Club at the end of August 2025, they had just hosted the Scottish Boys Under 16 Championship. This was during one of the hottest summers and longest droughts on record.

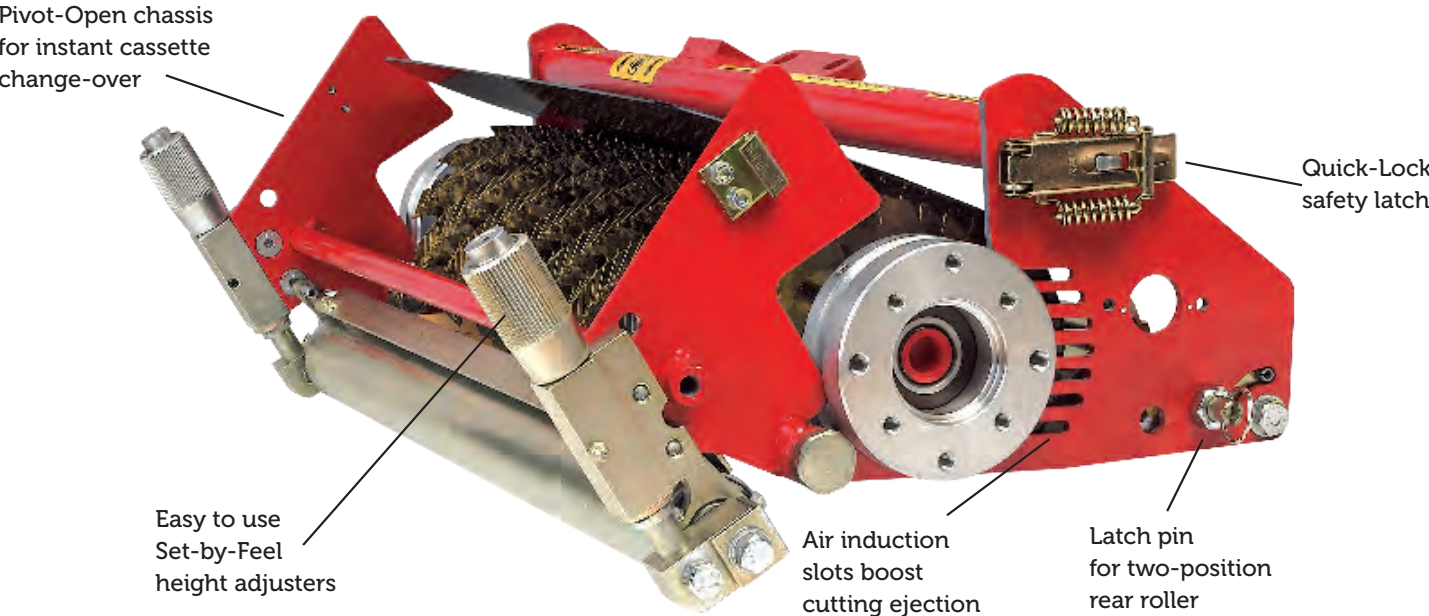

Nevertheless, Heady Greenkeeper Stephen Borthwick was full of praise for his new Thatch-Away Micro-Groomers. He said: "We recently demoed a set of Micro-Groomer units from GreenTek, just before the Scottish Boys Under 16 Championship. We used them once and the members that were playing noticed such a difference in trueness and green speed leading up to the tournament. We Micro-Groomed three times in different directions and the speed that that put on the greens was excellent".

He added: "Our members playing just before the tournament noticed such a difference in speed and the health of the putting surface as well. During the tournament, the feedback we received was excellent, particularly the feedback on our greens. The Micro-Groomers put on easily another foot of pace on the greens, so it's a very, very handy tool to have in your shed to use at any time of year".

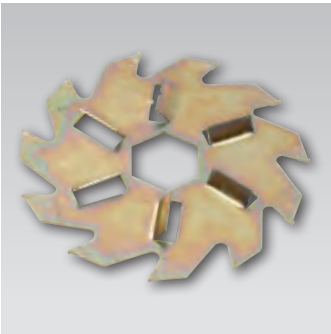

"I managed to get the greens running at 11 on the Stimpmeter and it obviously helped trueness as well"

UNIQUE THATCH-AWAY FEATURES

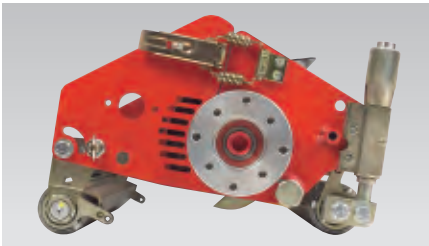

Each quarter turn click adjusts height by 0.25mm

Tungsten tipped blades stay sharp for years

Fan spacers cleanly vacuum up debris

BPS Blade Protection System protects blade tips during storage

FREE STORAGE RACK

Store your Thatch-Away cassettes easily and safely with our Racking System.

Get yours FREE when you order two extra sets of Thatch-Away cassettes.

CASSETTES FOR EVERY TASK

Build your own greens care system with a choice of cassettes including the latest addition of Micro-Groomer.

Micro-Groomer

For an ultimately groomed surface

WATCH THE VIDEO

Combining extra thin 11 tip blades with ultra-close 6.5mm spacings the Micro-Groomers effectively enable you to double-verticut in a single pass. Typically set at 1 or 2mm they provide the ultimate grooming for refining the leaf texture of your greens.

Scarifier

For a thatch-free root zone

WATCH THE VIDEO

Periodic use of the Scarifier Cassettes set at 8mm to 12mm deep will remove and sweep up enormous volumes of thatch from deep within your root zone, enabling air and topdressing to enter, and promoting microbial action that will further break down the thatch layer.

Verticutter

For a thatch-free surface

WATCH THE VIDEO

With their revolutionary FanForce tungsten-tipped blades spaced at just 10mm apart, the Verticutter Cassettes will remove and vacuum up an incredible amount of thatch. They leave an impeccably groomed surface which is smooth and fast. Most courses use them set between 0mm and 3mm working depth. Maximum working depth is 6mm.

Fine-Grass

For fine fescue and bent

WATCH THE VIDEO

The Fine-Grass cassette has ultra-thin, 1mm, tungsten-tipped blades at 15mm wide spacings. Specially designed for preventing thatch from building up in fine fescue and bent grasses. Typical working depth 1mm to 2mm, maximum depth 6mm.

Deep Slicer

For vigorous roots and growth

WATCH THE VIDEO

To prune the grass roots, stimulating vigorous new growth, and to enable air to penetrate even deeper into the root zone allowing gas exchange to take place, the Deep Slicer Cassettes cut continuous 20mm deep slits in the green.

Star Slitter

For an aerated root zone

WATCH THE VIDEO

The Star Slitter Cassettes mounted on your greens triple mower provide a fast way of aerating to a depth of approximately 20mm. The surface is left undisturbed, and play can immediately continue.

Greens Roller

For faster smoother greens

WATCH THE VIDEO

A regular light rolling of your greens enables you to maintain a smooth, fast surface without mowing so close. These solid steel roller cassettes fit straight into the Thatch-Away units, providing you with a highly effective greens roller for minimum expense.

Bermuda Tamer

Keep bermuda healthy

WATCH THE VIDEO

Keeping bermuda grass healthy and manicured is a challenge, but the Bermuda Tamer Cassette provides an unbelievably powerful way of keeping this aggressive grass under control. Thousands of high tensile steel bristles give a superbly groomed surface and a smooth, true ball roll.

Sarel Roller

For a surface that breathes

WATCH THE VIDEO

To keep your turf growing strongly in summer or drought periods when the surface tends to get sealed over, the Sarel Roller Cassettes allow entry for irrigation water and nutrients to a depth of approximately 20mm. They are also an ideal preparation for over-seeding.

Rotary Brush

For a gently brushed surface

WATCH THE VIDEO

The rotary brush cassettes are ideal for removing dew, wormcasts and light debris throughout the year. They will also collect the coarser residues left after deep scarifying, coring and brushing-in top dressing.

Top Dressing Brush

For evenly dispersed top dressing

WATCH THE VIDEO

The Top Dressing Brush Cassettes follow the contours of your greens to evenly brush-in your top dressing, without scraping it off the crowns and dumping it in the hollows like a drag mat does. They are also ideal for standing up the grass for an extra clean cut and a faster ball roll.

GREENSMOWER ATTACHMENTS

TRIPLE CORE PUSHER

QUICK AND EASY CORE COLLECTION

Take the back ache out of collecting up your aeration cores by using the new patent-pending GreenTek Triple Core Pushers. Simply attach them to any popular greens triple in place of your mowing units, and use them to clear the cores off your greens into neat heaps ready for removal with your utility vehicle.

Sliding over the turf on smooth skids, the three individual units accurately follow the contours of your greens just like your mowing units do, without marking. The Triple Core Pushers vastly reduce the manpower and time taken to do your hollow coring, enabling you to quickly complete the job and get your greens back in play. Plus they eliminate the back-breaking job of pushing a snow shovel for hours on end!

Available for all popular greens mowers

Clear cores in minutes, without the back-ache!!

Simple and quick core removal

- Eliminate hours of back ache!
- Effortlessly clears a green in minutes
- Massive saving of time and manpower
- Fast and manoeuvrable
- Accurately follow greens contours
- Available to fit Toro TriFlex and 3250, John Deere 2500 and 2750, Jacobsen GP400

CORE COLLECTION MADE QUICK AND EASY

Perched on the cliffs between Highcliffe and Milford-on-Sea, Barton-on-Sea Golf Club commands spectacular views across the Solent toward the Needles on the Isle of Wight. Its 27 holes are laid out in three distinctive loops of nine, each beginning and ending near the newly refurbished clubhouse, giving golfers variety, challenge, and scenic coastal golf.

A leading figure behind the ongoing development of the course is Jon Worrall, who began his career at Barton-on-Sea in 2006 as an apprentice greenkeeper. His dedication, and passion for the course care saw him steadily rise through the ranks—first to Head Greenkeeper, then Course Manager, and today to General Manager. Throughout this progression, Jon has always pushed the boundaries of innovation and continual improvement.

True to that spirit, he was among the first to try out the new GreenTek Triple Core Pushers, looking for tools that could increase productivity and take unnecessary back ache out of tasks. Jon explains, *"GreenTek supplied these Triple Core Pushers and they arrived on a pallet already assembled. It was a straightforward process. We attached them to a Toro Triflex and we were in the field using them within minutes."*

"The GreenTek Triple Core Pushers have been a complete game changer for us here at Barton-on-Sea Golf Club. We have simplified the operation from an eight man team down to a four man team, thanks to the Triple Core Pushers. The task of clearing up hollow cores is now effortless."

"The simple use, and simplicity of design protects the grass. With the skids, they do not harm over undulations. They do not scalp. Clearing up hollow cores used to be an eight hour operation. We have now reduced this down to five hours through the use of the Triple Core Pushers supplied by GreenTek."

Jon's forward-thinking approach reflects the broader philosophy at Barton-on-Sea Golf Club, combining tradition with innovation to maintain exceptional course standards. Under his leadership, Barton-on-Sea has embraced

modern practices, whilst maintaining an unwavering commitment to quality, ensuring that the club continues to thrive as it moves forward.

"From an eight man team down to a four man team...the task of clearing up hollow cores is now effortless."

SELECT-A-VIBE

FOR CONSISTENTLY FAST GREENS

Attached to your greens mower, Select-A-Vibe Rollers produce measurably smoother and faster greens than other types of rollers.

The three 22" Select-A-Vibe units follow your greens' contours and leave straight full-width stripes, just like your mower does. Their 1.5m (5') rolling width enables you to roll greens faster than other rollers.

You can also use the vibratory action of the rollers to vibrate-in topdressing. By getting the topdressing further down into the surface, you stop it blunting your mower's blades and can dramatically reduce downtime and regrinding costs.

Do all your greens stimp at the same speed? They can now with the Select-A-Vibe rollers. By varying your speed of travel when rolling you can vary the vibrations per metre that you apply to each green, helping to even out inconsistencies between different greens.

- With 5 vibration power levels you can find the optimum settings to suit your greens conditions
- Roll straight stripes that match your mowing width
- Quick to use and to transport from green to green
- Vibrate-in topdressing without bridging over coring holes
- 5 vibration power levels for multiple tasks
- Fits both electric and hydraulic drive greens mowers

Easily adjustable vibration power levels

Chose the optimum setting to suit your task:

- 1 Establishing new greens
- 2 Regular rolling
- 3 Pre-competition rolling
- 4 Trueing up after aeration
- 5 Vibrating-in topdressing

Fits to all popular greens mowers

THATCH-AWAY WALK BEHIND

HIGHEST PERFORMANCE PEDESTRIAN VERTICUTTER

Golf greens, bowling greens, and croquet lawns need a totally clean finish for green trueness and a smooth ball roll.

Nothing comes close to the Thatch-Away Walk Behind verticutters. Available in 24" and 30" cutting widths, the Walk-Behind has been designed to give you the highest performance available in pedestrian verticutters.

The unique Fan-Force tungsten tipped blades combined with the Thatch-Away's extra-long grass deflector create a powerful air vortex which literally sucks up thatch and blasts it into the grass box, leaving a debris-free surface.

The precision manufactured rear roller, and the rear roller scraper incorporating a special trough to collect the debris it removes, are features that set the Thatch-Away apart from other machines.

An interchangeable rotary brush reel is also available for when you wish to give the surface a gentle grooming, or remove surface debris and Poa Annua seeds.

- The ultimate verticutting experience on golf and bowling greens and fine lawns
- 605 tungsten blade tips leave a totally clean finish
- Unique Fan-Force blade design literally sucks thatch out of the turf
- Large collection box saves time emptying clippings
- Increases ball roll and green trueness
- Powerful 5.5hp Honda engine for rugged reliability

Rear roller scraper trough collects debris as you go

LOW LOADING TRAILER

TOTALLY VERSATILE GROUNDCARE TRAILERS

- Versatile trailer system for all groundcare equipment
- Superior fully-welded construction
- Hot dip galvanized for maximum durability
- Drive-in tailgate ramp suitable for all kinds of small machinery
- Load capacity 400kg and 600kg

Safe transportation of equipment between greens or to and from sports fields is essential.

The Low Loading Trailer offers you an ideal means for transporting all types of groundcare equipment and supplies.

The drop-down tailgate provides easy loading access for a variety of small machinery.

Besides transporting mowers, these trailers can be used for tasks as diverse as carrying divot mix or collecting leaves.

A range of useful accessories is also available, including a 1" rubber mat, a sliding divider and a mower clamp for extra security during transportation.

Standard Low Loading Trailer	
Body dimensions	152 x 99 x 43cm

BUNKER-DRAINER

YOUR SOLUTION FOR FLOODED BUNKERS

- Quickly empties flooded bunkers, trenches and graves with no priming
- 5hp Honda engine with a high volume rotary impeller pump

One thing you can't control is the weather. If you have heavy rain on the night before your big tournament, what will your bunkers look like in the morning? It's at times like this that you'll be glad you've got a GreenTek Bunker-Drainer in your shed.

This pump means business! It is not just your conventional water pump with a suction hose that is difficult to get primed, and keep flowing when the level gets low.

The Bunker-Drainer's 5hp Honda engine drives a heavy duty flexible drive shaft, with a high volume rotary impellor pump mounted directly on the end of it. Because the pump is actually in the water it needs no priming, and can handle muddy water with ease.

Bunker-Drainer	
Engine	Engine Honda GX160 5hp
Drive shaft	5.0m
Pump	Heavy duty 2" submersible pump
Hose	10m of 2" layflat hose included
