

# HOW TO SURVIVE DROUGHTS AND DOWNPOURS

In summer, turf becomes sealed by a combination of dust and foot traffic. This results in the irrigation or rainfall evaporating off without being absorbed into the root zone. And then in heavy rain, a sealed surface results in a mass of puddles.

Hence the benefit of using a Sarel-Roller to spike the surface with thousands

of small holes. The rear brush then immediately sweeps the dew or irrigation down the holes into the root zone to conserve valuable moisture in summer. And when it rains, you will have an open surface that drains freely.

## SAREL-ROLLER

# GreenTek®

Trusted by the best in the game

- Thousands of small holes pricked quickly and effortlessly
- Break through sealed turf surfaces
- Brushes in moisture
- Reduces risk of fusarium
- Decreases need for wetting agents
- Ideal for use before overseeding to increase germination rate

# SAREL-ROLLER

**BRUSH
